INNOVATION AT WORK FOR OVER 35 YEARS

FASTER, CLEANER TEAR-OFFS

Over the years, John Stout, founder of Pioneer Roofing, has used his engineering background to create new ways to automate and mechanize the most unpleasant part of reroofing—the tear-off. Customers are fascinated to watch Pioneer crews work because they use specially-designed carts for moving debris, gravel, insulation and membrane, coupled with the creative use of a truck crane and their own dumpster trucks.

This carefully developed tear-off system enables Pioneer to work faster and cleaner with smaller crews, typically **resulting in savings of up to 30%** over conventional tear-off methods.

EFFICIENT INSTALLATIONS

As a Master Contractor, Pioneer Roofing recognizes that a high quality roofing job requires more than skilled workers. It requires workers who maximize their productivity through unique tools and machines. Pioneer combines worker skill with mechanized systems to install the most reliable and longest-lasting roofs—even on tight deadlines.

AN INCREDIBLE VALUE FOR YOU

In 35 years, Pioneer has dealt with virtually every kind of roofing challenge, commercial or residential. We have developed unique ways to solve roofing challenges resulting in our ability to do higher quality work with smaller work crews in less time. It all adds up to higher value for you.

Because of their unique factory-certified status, the roofs Pioneer installs are eligible for special warranties — all backed by GAF's financial clout as North America's largest roofing manufacturer.
